The proper flashing of windows, doors and other fenestrations helps insure against owner warranty claims due to water intrusion, as well as averts potential exposure to litigation and safeguards builders’ reputations.

The FortiFlash waterproof flashing membrane is part of a complete Moisture Control System for walls engineered by the Fortifiber Building Systems Group®. When integrated into the building envelope, our solutions help manage and eliminate moisture-related problems including water-related structural failures, mold and mildew. The design of FortiFlash reflects our commitment to building a product that meets all ASTM, AAMA and field standards.

Premium Self-Adhesive Flashing Membrane
FortiFlash is engineered to deliver lasting protection against water intrusion in the most demanding environmental conditions. It is the premium self-adhesive waterproof flashing membrane for windows. It is also ideally suited for flashing non-roofing horizontal conditions such as pot shelves, parapets, sill pans and recessed windows. Its strong adhesion makes it a perfect choice for sealing around common through-wall penetrations such as hose bibs, vents, electrical boxes and exterior lights. Yet, its price makes FortiFlash the price/performance solution for the most challenging construction requirements.

Reinforced by an incredibly strong cross-laminated high-density polyethylene film, FortiFlash can be installed around protrusions and into the tightest corners without delaminating or tearing. Its self-sealing rubberized asphalt core stays in place in the most punishing weather conditions.

FortiFlash is available in 4, 6, 9, 12, 18 and 36 inch widths, in both 25 and 40 mil thicknesses – so you can protect both vertical and non-roof horizontal conditions. FortiFlash 25 is ideal for working in tight corners, while FortiFlash 40 is suited for those situations where a thicker product is required.

Part of a Complete Moisture Control Solution
FortiFlash integrates with Fortifiber’s complete system of flashing products and accessories, Moistop® Sealant and our entire line of weather-resistive barriers to form a comprehensive weatherization system that protects homes and buildings from moisture intrusion problems. Designed through the use of building science and perfected in the field, this is the only complete moisture control system available in the industry from a single source. Comprised of compatible materials, the system takes the guesswork out of selecting flashing, sealing materials, and weather-resistive barriers that work together and deliver performance you can count on.

Decades of Proven Performance
FortiFlash is a product distributed by the Fortifiber Building Systems Group. With more than a seventy-five year history of proven performance, technical expertise and practical know-how, the company has become a trusted partner to builders, architects and code officials.
FortiFlash is a premium 25 mil and 40 mil self-adhesive waterproof membrane designed for use as a concealed flashing in frame construction where a waterproof membrane is required.

Composition: FortiFlash is composed of a self-sealing SBS modified asphalt core laminated to a cross-laminated, high-density polyethylene film reinforcement with a siliconized paper release sheet.

Size & Weight: FortiFlash is supplied in convenient 4", 6", 9", 12", 18" and 36" widths by 75' long rolls. 25 mil weight is approximately 3.8 (4"), 5.7 (6"), 8.5 (9"), 11.4 (12"), 15 (18") and 30 (36") lbs. per roll; 40 mil weight is approximately 5.7 (4"), 8.6 (6"), 13 (9"), 17 (12"), 26 (18") and 52 (36") lbs. per roll.

Complies to the flexible flashing specified in Section 1405.3 of the 2003 International Building Code®, Section R703.8 of the International Residential Code® and Section 1402.2 of the 1997 Uniform Building Code™.

American Society for Testing & Materials (ASTM):

- ASTM D-412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers-Tension
- ASTM D-903 - Peel or Stripping Strength of Adhesive Bonds
- ASTM E-96 - Water Vapor Transmission of Materials
- ASTM E-154 - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover

Physical Properties: FortiFlash is continually tested in accordance with ASTM procedures. The values shown in Table 1 are averages obtained in these tests.

Limitations: For optimum adhesion, FortiFlash should be applied at temperatures between 40° F (4.4°C) and 120° F (48.9°C). Be cautious about using FortiFlash where it can be exposed to temperatures above its Service Temperature such as hot climates or behind fiber cement and metal sidings that absorb a significant amount of heat. Product should be covered as soon as possible (exposure not to exceed 45 days). Inspect product to ensure it is free of any damage which may compromise its moisture-resistant properties. FortiFlash is not compatible with EPDM or flexible (plasticized) Polyvinyl Chloride (PVC) based membranes. Where installed horizontally or with a slope of less than 60° do not use fasteners. FortiFlash also is not compatible with some sealants. Consult with sealant manufacturer for compatibility information. Direct exposure of sealant to the adhesive side of FortiFlash can be detrimental if the amount of sealant exceeds what is specified in FortiFlash’s installation guide. Please follow installation guide recommendations regarding location and amount of sealant to be used. Fortifiber strongly recommends against the practice of using a “knockdown bead of sealant,” or “buttering the flange” with sealant, because this amount of sealant is excessive and unnecessary.

Installation: Prior to installation, surfaces should be dry and cleaned free of any dirt or other substances that may interfere with adhesion, as well as any sharp protrusions. Surfaces shall have no voids, damaged, or unsupported areas. Repair surfaces before installing membrane. Primer must be used over some substrates including gypsum board (including Dens-Glass Gold), concrete and masonry. For all other substrates field test a small sample of FortiFlash prior to application. If adhesion is inadequate, apply 3M Super 77™ Spray Adhesive according to the manufacturer’s application instructions. Areas not covered with membrane the same day must be re-primed.

To apply FortiFlash, peel away the release paper and press membrane firmly over substrate, applying sufficient pressure with a metal or wood roller along the entire membrane to ensure a continuous seal. For a complete set of installation instructions, visit www.fortifiber.com or request a copy from Technical Assistance at 1-800-773-4777.

Availability: The Fortifiber Building Systems Group’s products are distributed nationwide. For product information and pricing, please call a Fortifiber distributor near you. If you need assistance locating a participating distributor, please call our Customer Service Department at 1-800-773-4777.

Fortifiber Warranty: Fortifiber Corporation warrants that its products are in compliance with their published specifications and are free from defects in materials and workmanship for a period of two years from the date of purchase. This warranty does not apply to loss due to abuse. Material found to be defective will be replaced at no charge by Fortifiber, but in no event shall Fortifiber be liable for any other costs or damages, including any labor costs.

THIS EXPRESS WARRANTY IS GIVEN IN LIEU OF AND EXCLUDES ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Fortifiber’s sole obligations under this warranty are as set forth herein. In no event shall Fortifiber be liable for any lost revenue or profits, direct, indirect, special, incidental or consequential damages of any kind.

This product may be eligible for Fortifiber’s FortiShield 10 year warranty when used in conjunction with other Fortifiber products. Please see our website at www.fortifiber.com/warranty.htm for details.
