Barricade Building Products, the industry leader in pressure sensitive adhesive technology, is proud to offer BARRICADE® Flash Right™ window and door flashing tape. Flash Right™ is a high-performance, asphalt-based window and door flashing membrane designed to provide a permanent weather-tight seal to protect from moisture, leaks and air penetration when properly installed.

**SPECIAL FEATURES**

- Tough durable facer.
- UV resistant backing withstands degradation for up to 6 months exposure.
- Easy to install – recommended use of hand roller to provide uniform pressure during installation.
- Easy to remove release liner.
- Compatible with Barricade® Bead Right™ caulking.
- Improves energy efficiency by providing a barrier to air infiltration.

For more information on BARRICADE® Flash Right™ or to learn more about Barricade Building Products extensive line of flashing tapes, housewraps and underlayment materials for Building & Construction, contact your Barricade Building Products Sales Representative today!

**Installation**

Window Flashing Application
Step 1: Prepare rough opening.
Step 2a: Apply Barricade® Sill Corners
Step 2b: Cut and apply sill flashing
Step 3. Apply pan flashing
Step 4: Apply perimeter sealant*
Step 5: Install window
Step 6: Cut and apply side flashing

*Barricade Building Products recommends the use of Barricade® Bead Right™ caulk for use with Barricade Flash Right. Barricade® Flash Right™ is not recommended for use with solvent based caulk and should not come into contact with flexible vinyl material. Use of Nashua® 3575A adhesive or Polyken 1033a primer may improve adhesion on some sheathing boards.
